Doing Business on the Internet: Forms and Analysis/Chapter 8: Electronic Contracting/ § 8.05 Encryption and Digital Signatures

Once a certification authority verifies the identity of a subscriber, it would then issue a **digital certificate** which certifies that the public key of a key pair belongs to that particular subscriber. The subscriber could then attach the **digital certificate** to outgoing signed electronic messages. Among other things, the **digital certificate** would contain the subscriber's identity (as verified by the certification authority) and public key, and would ...

Doing Business on the Internet: Forms and Analysis/Chapter 10: Privacy on the Internet/§ 10.05A Electronic Banking Security

...reliable methods to prevent account fraud and identity theft that are commensurate with the risks associated with their electronic funds transfer (EFT) and online banking services. There are a variety of technologies and methodologies to authenticate online banking customers, including, among others, user names and passwords, personal identification numbers (PINs), **digital certificate**s, security "tokens" that produce one-time passwords, and biometric identification.

Doing Business on the Internet: Forms and Analysis/Chapter 11: Jurisdiction, Obscenity, Defamation and the Right of Publicity/§ 11.03 Obscenity

COPA also provides an affirmative defense to Web sites that restrict access to harmful material by requiring the use of a credit card debit card adult access code
